

GREEN-POLISHED CONCRETE is a composite material, poured in place or precast, which is used for floor treatments. It consists of variety of natural stone, quartz, marble, granite, recycled glass. The unique mixtures can be used for a superstructure or a discerning home owner.

Using lithium silicate densifier to penetrate and react into the GREEN-POLISHED CONCRETE floor. The densified floor surface will remain breathable, reduce porosity, reduce dusting, reduce water permeability and increase abrasion resistance. When properly applied, lithium silicate densifier will not leave the whitish blush characteristic of other sodium silicate products.

GREEN-POLISHED CONCRETE is an environmentally friendly system that combines of "green" concrete blinder likes recycled glass. The densifier produces a substantially denser concrete surface with enhanced durability.
